Computer Vision HW4 Report

Student ID: R10522606

Name: 曾柏翔

Visualize the disparity map of 4 testing images.

Report the bad pixel ratio of 2 testing images with given ground truth.

	bad pixel ratio
Tsukuba	3.22
Teddy	11.24

Describe your algorithm in terms of 4-step pipeline.

Step1: Cost Computation

使用 squared difference 來計算 cost,因為事先經過 image rectification,所以僅對 x 方向計算"Il to Ir" and "Ir to Il"的 cost。

Step2: Cost Aggregation

使用了 joint bilateral filter 和 guided filter, 嘗試了幾組參數後,得出 guided filter 的結果比較好,因此最終選用 guidedFilter(radius=8)。

Step3: Disparity Optimization

透過 np.argmin()將上一步的 aggregate cost 找尋最小成本。

Step4: Disparity Refinement

透過 left-right consistency check , 將數值為 0 (孔洞)記錄下來 , 接著進行 hole filling , 最後再通過 weighted median filtering 來達到 disparity refinement 。
